

Sentinel

Enterprise software for securely distributing and collaborating on any document or file.

Sentinel stops the access, copying and theft of your digital intellectual property, granting you complete control over your documents at all times - even when they are accessed outside your company.

Sentinel also delivers full access to the application used to create your content, enabling authorized parties to work on your document remotely without downloading it - protecting your intellectual property, enhancing collaboration and workflow, and boosting the productivity of your business.

HOW SENTINEL WORKS

The digital distribution of content creates challenges for your enterprise. Sentinel addresses these issues through an entirely new way of sharing and protecting your documents by removing the physical transfer of information, while enhancing collaboration and access.

Sentinel combines your document and its application into a single, shareable hyperlink (URL) that can be quickly and easily inserted or distributed via any digital content mechanism, including e-mail, web sites, portals, intranets, extranets and instant messaging.

Security is achieved by providing access to your content running remotely from your server via a Web browser – safely sharing the information while maintaining your intellectual property behind the corporate firewall and never physically distributing it.

Collaboration is enhanced by simultaneously delivering full access to the application used to create that content, enabling authorized parties to work on your document without downloading it or installing its software.

HOW SENTINEL BENEFITS YOUR ENTERPRISE

Sentinel brings a new level of security and productivity to document sharing and benefits your entire organization by:

Protecting your intellectual property. Sentinel monitors and safeguards your content wherever it goes, preventing the unauthorized access, copying or piracy of your proprietary information.

Enhancing your collaboration. Sentinel delivers remote access to both your document and the application used to create it, allowing others to collaborate on your content without downloading it or the software.

Boosting the productivity of your business. Sentinel leverages the software already installed on your desktops, providing enterprise-wide capability without installing and learning yet another software package.

SENTINEL KEY FEATURES

Sentinel offers an array of powerful features that deliver secure and enhanced collaboration to your business:

Digital Rights Management

Access Control - controls how and when your documents are accessed, including the number of times, dates and duration of viewing sessions.

Document Privileges - restricts the printing, download, modification and forwarding of your information.

E-mail Notification - receive e-mail notification of when and who accesses your documents.

Rights Withdrawal - change the properties of any shared document at any time and even immediately disable documents when priorities change or new risks arise.

Document Management

Dynamic Updates - content is instantly updated on your server when changes are made.

One-Click Return - allows recipients of your documents to return changes and feedback with one easy click.

Version Control - always maintains the most recent version of your documents for access by others.

Local Printing - prints documents locally when authorization is provided.

File Management

Secure File Storage - centrally store and access documents via the Web.

File Upload and Download - easily transfer documents between your desktop and our web-based interface.

One-Click Access - access all your documents with one click.

Single Instance Storage - when sending copies of the same e-mail to multiple parties, only one version of your document is centrally stored and maintained.

Workflow & Collaboration

Browser-Based Access to Applications - documents and applications are running remotely from your server.

Collaborative Environment - create an instant, configurable, dynamic environment to engage in collaboration with suppliers, partners or customers.

User Authentication - authorize who is viewing your content via password protection and verification.

MARIX TECHNOLOGIES

Marix is a leading provider of secure content sharing solutions.

Marix enterprise software solutions enable your entire organization to securely distribute, receive and collaborate on any document or file moving in or out of your company - increasing security, improving productivity, enhancing collaboration, reducing costs, and protecting your intellectual property.
